

Miami Herald Slip Ring Retrofit for Newsliner

These are pictures of our slip ring assembly. The photo called "gears" alteration for the air that you will need to do because the slip ring is now attached where the air was attached on your reels. The air now goes in through the varatio end. In the slipping pictures, the red device mounted to the slip ring assembly is the encoder for arm position. If you would like to borrow one of these assemblies to do some R&D we might be able to arrange something. Again, they cost \$5000 each but in my opinion, they are well worth it.

If you have any questions, please call me at 305-376-2898 or email me at lcollins@herald.com. I hope that this helps.
